

V3.1 Release Date: 11/23/2015**Feature enhancements:**

- #1777 - Upgraded application firmware to support new features available in Audinate's Ultimo firmware version 2.2.3.1.
- Adds ability to use the Identify feature directly from Dante Controller

Corrected Issues:

- #1530 - Updated application firmware to support communications interface for new Ultimo firmware.
- #1914 - Corrected network message handling for invalid data.
- #1915 - Corrected an issue that could affect the factory default command if the preset data had become corrupt.
- #2086 - Corrected issue that could occur if corrupt data was received over the network control interface.
- #2317 - Removed extra carriage return character on message NACKs.

Notes:

- 1) Refer to the unIFY Product Update Guide for details on applying an update.
- 2) Designed to be used with unDIO2x2 Dante Firmware release V4.1.1.
- 3) If updating a unit configured with Dante Proprietary interface (-C), update Dante to Direct UDP (-U) first using unDIO2x2_app_3.0.0.dnt.
